Re: Notice of Violation dated August 23, 2004  
EPA I.D. No.: ILD 981 951 767

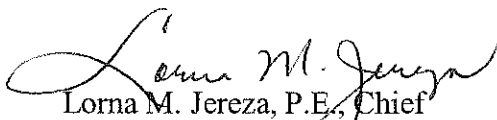

Dear Mr. Schulte:

On August 23, 2004, the United States Environmental Protection Agency (U.S. EPA) issued the Owens Corning facility located in Summit, Illinois (Owens or you), a Notice of Violation (NOV) identifying violations of the hazardous waste management requirements found in Title 35 of the Illinois Administrative Code. U.S. EPA received Owen's response to the NOV on September 9, 2004.

This letter is to inform you that U.S. EPA has reviewed Owens' response and determined that no further enforcement action will be taken at this time. This determination does not limit the applicability of the requirements evaluated, other RCRA regulations, or regulations under other environmental statutes. Owens' hazardous waste management operations will continue to be evaluated by U.S. EPA and the Illinois Environmental Protection Agency in the future.

If you have any questions and/or concerns regarding this matter, please contact Sheila Burrus, of my staff, at (312)886-3587.

Sincerely,

Re: Notice of Violation  
Compliance Evaluation Inspection  
EPA I.D. No.: ILD 981 951 767

Dear Mr. Schulte:

On July 16, 2004, a representative of the United States Environmental Protection Agency (U.S. EPA) inspected the Owens Corning (Owens Corning or you) facility, located in Summit, Illinois. The purpose of the inspection was to evaluate Owens Corning's compliance with certain provisions of the Resource Conservation and Recovery Act (RCRA); specifically, those regulations related to the generation, treatment and storage of hazardous waste. Please find enclosed a copy of the inspection report for your reference.

Based on the U.S. EPA's July 16, 2004, inspection that included personal observations made by the inspector at the time of the inspection, as well as review of records and information provided by Owens Corning personnel, U.S. EPA finds that Owens Corning is engaged in the management of hazardous waste without a hazardous waste storage permit, and is in violation of certain requirements of the Illinois Administrative Code (IAC) and the United States Code of Federal Regulations (C.F.R.). To be eligible for the exemption from the requirement to apply for and obtain a hazardous waste storage permit, Owens Corning must be in compliance with the conditions of 35 IAC §§722.134(a) and (c) [40 CFR §§ 262.34(a) and (c)]. Specifically, U.S. EPA finds that Owens Corning is in noncompliance with the following conditions for a storage permit exemption, and in violation of the following requirements:

- a. In order to avoid the need for a hazardous waste storage permit, a large quantity generator must submit a copy of the facility contingency plan to all local police departments, fire departments, hospitals and local response teams that may be called upon to provide emergency services. See, 35 IAC § 722.134(a)(4) and 35 IAC § 725.153(b) [40 CFR §§ 262.34(a)(4) and 40 CFR § 265.53(b)]. This is also a requirement of owners and

operators of hazardous waste storage facilities, under 35 IAC §§ 724.153(b) and 725.153(b) [40 CFR §§ 264.53(b) and 265.53(b)]. At the time of the inspection, Owens Corning had not submitted a copy of the facility contingency plan to all local police departments, fire departments, hospitals and local response teams that may be called upon to provide emergency services. Owens Corning therefore failed to comply with the above-mentioned condition for a permit exemption, and violated the above-referenced storage facility contingency plan requirements.

- b. In order to avoid the need for a hazardous waste storage permit, a large quantity generator must inspect areas where containers are stored, at least weekly, for leaks and deterioration caused by corrosion or other factors. See, 35 IAC § 722.134(a)(1)(b), and 35 IAC § 725.274 [40 CFR §§ 262.34(a)(1)(ii); 40 CFR § 265.174]. This is also a requirement of owners and operators of hazardous waste storage facilities, under 35 IAC §§ 724.274 and 725.274 [40 CFR §§ 264.174 and 265.174]. At the time of the inspection, Owens Corning had not inspected areas where containers were stored, at least weekly, looking for leaks and deterioration caused by corrosion or other factors. Owens Corning therefore failed to comply with the above-mentioned condition for a permit exemption, and violated the storage facility container inspection requirement.
- c. In order to avoid the need for a hazardous waste storage permit, a large quantity generator must maintain the following documents and records at its facility: the job titles for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position; a written description of the type and amount of both introductory and continuing training that will be given to each person; and records that document that the training and job experience required have been given to, and completed by, facility personnel. See, 35 IAC § 722.134(a)(4), and 35 IAC § 725.116(d) [40 CFR §§ 262.34(a)(4), and § 265.16(d)]. This is also a requirement of owners and operators of hazardous waste storage facilities, under 35 IAC §§ 724.116(d) and 725.116(d) [40 CFR §§ 264.16(d) and 265.16(d)]. At the time of the inspection, Owens Corning had not maintained written job descriptions for positions at the facility related to hazardous waste management. Owens Corning therefore failed to comply with the above mentioned condition for a permit exemption, and violated the storage facility personnel training requirement.

U.S. EPA received Owens Corning's submittals on August 5, 2004 in response to the violations cited above. As of this writing, based on our review of these submittals, Owens Corning has come into compliance with the conditions and requirements noted in a and b above.

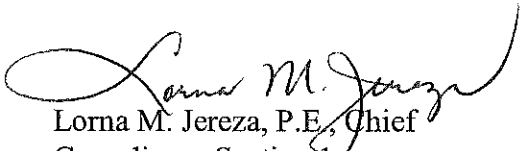

At this time, U.S. EPA is not requiring Owens Corning to apply for a hazardous waste storage permit, so long as Owens Corning immediately establishes compliance with the conditions for an exemption outlined in item c, above. Under Section 3008(a) of the Resource Conservation and Recovery Act (RCRA), 42 U.S.C. § 6928(a), U.S. EPA may issue an order assessing a civil penalty for any past or current violation and requiring compliance immediately or within a

specified time period. Although this letter is not such an order, we request that you submit a written response to the outstanding violation cited in item c above within 30 days of receipt of this letter. The response should document the actions, if any, that you have taken since the inspection to comply with the above requirements. You should submit your response to Sheila Burrus, United States Environmental Protection Agency, Region 5, 77 West Jackson Boulevard (DE-9J) Chicago, Illinois 60604.

If you have any questions regarding this matter, feel free to contact Sheila Burrus of my staff, at (312) 886-3587.

Sincerely,

A handwritten signature in black ink, appearing to read "Lorna M. Jereza". The signature is fluid and cursive, with a large loop at the beginning and a trailing flourish at the end.

## **RCRA Compliance Evaluation Inspection Report**

### **PURPOSE OF INSPECTION**

The purpose of the inspection was to conduct a compliance evaluation inspection (CEI) at the facility with respect to management of its RCRA regulated waste.

### **INTRODUCTION**

On July 16, 2004, I, Sheila Burrus of the United States Environmental Protection Agency, Region 5, Enforcement and Compliance Assurance Branch, conducted a compliance evaluation inspection of the Owens Corning facility located in Summit, Illinois. Upon arrival at the site, I presented my inspector credentials and introduced myself to Mark Schulte, Owens Corning Plant Leader. I made a brief introduction as to the purpose of the inspection, and, in compliance with the Small Business and Regulatory Fairness Act (SBREFA), provided a copy of the U.S. EPA Information sheet entitled, "Information for Small Business." I interviewed Mr. Schulte during the inspection.

### **PLANT DESCRIPTION**

According to Mr. Schulte, Owens Corning produces asphalt material used in roofing, driveways and damp-proofing basements. The facility uses mineral spirits (solvent) in the asphalt manufacturing process. Owens Corning employs approximately 22 employees and operates 5 days per week, 24 hours per day.

### **HAZARDOUS WASTE GENERATION**

Mr. Schulte indicated that Owens Corning was a conditionally exempt small quantity generator until 2002. Owens Corning is currently a large quantity generator of hazardous wastes. Owens Corning has been a large quantity generator of hazardous waste after performing tanks clean out over the past several years. The tanks cleaned out in March 2004 generated seventy 55-gallon drums of hazardous waste (mineral spirits). Owens Corning generates very small amounts of asphalt cutbacks with mineral spirits (xylene, naphtha - D001/F003), laboratory waste from off-spec. and/or expired chemicals (lab pack - D001, D002, D005 D009). The facility has two 227,000 gallon raw material tanks, six 110,000-118,000 gallon cutback tanks, two 32,000 gallon cutter stock tanks (oil tanks), and two mineral spirit tanks.

## **RECORDS REVIEW**

A records review was conducted at the facility covering manifests, training records, biennial reports and the contingency plan.

### **Contingency Plan**

I reviewed the most current copy of Owens Corning's contingency plan. The facility did not submit a copy of its plan to the local police department, fire department, hospital and local response team.

### **Training Records**

I reviewed training records for the years 2002 and 2003. The facility was unable to provide job description for its employees that handle hazardous waste.

### **Manifests**

I reviewed manifests for the years 2002, 2003 and 2004. No apparent violations were noted.

### **Biennial Reports**

I reviewed biennial reports for the years 2002 and 2003.

### **Weekly Inspection**

The facility does not conduct weekly inspections. Mr. Schulte is aware that weekly inspections should be conducted and stated that he is in the process of developing weekly inspection logs.

## **FACILITY INSPECTION**

I was accompanied by Mr. Schulte during the tour of the facility which began in the satellite accumulation area and ended in the hazardous waste storage area.

The satellite accumulation area is located next to the loading rack. There were two half full 55 gallon drums of mineral oil. I informed Mr. Schulte that only one drum of the same waste is allowed at a satellite accumulation area. I informed Mr. Schulte that the two drums of mineral spirits should be combined and moved to the hazardous waste storage area, as one full drum of hazardous waste.

The hazardous waste storage area is located near the maintenance area. There was no hazardous waste stored on site at the time of the inspection. The last hazardous waste shipment was in March 2004.

An exit interview was performed.

Dear Mr. Szydelko:

On January 30, 2001, an inspection of the above referenced site was conducted by Anna Van Orden representing the Illinois Environmental Protection Agency. The purpose of the inspection was to determine if the site was in compliance with the applicable requirements of the Illinois Environmental Protection Act and 35 Illinois Administrative Code 722/A through D; Part 728/Sections A through E.

At the time of this inspection, no violations were noted. A copy of the inspection report is enclosed. Should you have any questions concerning this inspection, please contact Anna Van Orden at 847/294-4000.

Sincerely,

Clifford Gould, Regional Manager

Trumbull Asphalt (Owens Corning)  
February 14, 2001

### **NARRATIVE**

Prepared by Anna Van Orden

A CEI inspection was conducted at Trumbull Asphalt Plant, a division of Owens Corning Fiberglas Corp., located at 7800 West 59<sup>th</sup> Street in Summit, IL. The Summit plant produces asphalt material used in roofing, driveways and damp-proofing basements.

The facility receives used solvent from Eco-Clean and Crystal Clean under a bill of lading (copy attached) to be used as product in the asphalt manufacturing process. (See attached description of process.) *(new material?)*

**Amounts of used solvent purchased in 2000:**

Eco-Clean – 12,000 gallons  
Crystal Clean – 490,000 gallons

**Amount of virgin solvent purchased in 2000:**

200,000 gallons

### **NON-HAZARDOUS WASTE GENERATED**

**Used oil/water**

- Shipped to Beaver Oil in Hodgkins, IL
- Amount shipped 5,000 – 10,000 gals/month

**Used Fluorescent Bulbs** shipped to Safety-Kleen once a year.

### **OBSERVATIONS**

The Owens Corning Fiberglas (Trumbull Asphalt Plant) in Summit, IL has four (4) state ID numbers assigned with different address locations. (0310065008, 0310065031, 0310065034, and 0310065062) The property is continuous and owned by Owens Corning Fiberglas. The numbers appear to be assigned to different waste generation activities, such as, field lab, maintenance and asphalt plant. Mr. Szydelko will contact Springfield to update notification for this facility and remove some of the numbers assigned to the facility. The notifications identify the facility as generator and/or small quantity generator. At the time of the inspection the facility was a non-handler.

Information was mailed to Mr. Szydelko for the Used Fluorescent Bulbs, either to recycle bulbs or use low mercury bulbs.

At the time of the inspection no violations were observed or cited.

FEB - 7 2001

IEPA - BOL  
DES PLAINES OFFICE

Anna,

The Owens Corning Trumbull asphalt plant receives all of our solvent including Eco-Solv by tanker truck under a regular Bill of Lading. (See attachments A & B). All VM&P Naphtha is stored at ambient temperature in a diked storage tank (see attachment C). Hot asphalt and solvent are pumped to tanks to make cutback asphalt – an asphalt product containing solvent to make the asphalt product pourable at ambient temperatures. A mesh screen to prevent any foreign material from damaging the pump protects all of our pumps. A condenser unit is used during the mixing process to capture and condense the solvent fumes and return them to the tank. The finished product is then loaded into tanker trucks via a loading rack equipped with a fume capture device that is routed through a Regenerative Thermal Oxidizer. Solvents are not treated or altered in any way during this process.

If you have any questions, please contact me at 708-594-6925

Sincerely

A handwritten signature in dark ink, appearing to read "Thomas Szydelko".

Conversation with: Jim McNamara, Plant Manager

(X) I Called Party ( ) Party Called Me DATE July 21, 2000 TIME 10:09 am - 10:24 am  
( ) Complainant ( ) Violator ( ) Public Inquiry ( ) Partitioner  
(X) Other SUMMARY OF CONVERSATION

What I Said:	What Other Party Said:
I identified myself and who I work for. I asked whether the Trumbull (Owenings-Corning) plant was receiving <u>used solvent</u> from Eco-Clean.	He said the plant had received two or three shipments from Eco-Clean in the past few months.
I asked how long the Trumbull facility had been accepting used solvent and what it was being used for.	He said the plant began taking <u>used mineral spirits</u> to add to their asphalt the last 7 months. The asphalt being made is used for drive-ways and for damp-proofing the basement of houses.
I asked how does the plant receive the used solvent and how is it being handled once it comes in.	He said the <u>plant receives the used solvent in bulk (trucks). It is then pumped to a 200,000-gallon tank at the facility.</u>
I asked whether the used solvent has to be altered in order for it to be used.	He said a filter was placed outside the tank about 4 or 5 weeks ago to filter the solvent as

What I Said:	What Other Party Said:
I asked if this had to be done because they are receiving used solvent and not just virgin mineral spirits.	it is pumped into the tank.
I asked how much mineral spirits is needed by the plant to add into the asphalt, and how much virgin to used solvent is currently added.	He said the filter would have been added anyway because of occasion complaints the plant receives about grit making its way into the asphalt.
I asked what tests are provided to the plant in order for them to accept the used solvent.	He said the plant adds about a million gallons of mineral spirits a year to the asphalt. <u>He estimated that about 1/2 of the mineral spirits currently blended into asphalt is used solvent.</u> The cost of new (virgin) solvent, according to Mr. McNamara, is around \$1.20 per gallon while the used solvent is bought for around \$0.50 per gallon.
I asked whether each shipment sent from Eco-Clean has to be analyzed before being accepted.	He said they are primarily concerned with the <u>flash point and the water content</u> of the material. He recalled that an analysis of Eco-Clean's used solvent was received.
I asked if they were satisfied with the used solvent received from Eco-Clean.	He said they don't have every shipment sampled and analyzed.
I asked if the asphalt being made at the facility had to meet Department of Transportation specifications.	He said they were.
	He said the plant's asphalt is being applied to driveways and other areas that don't have to meet DOT specifications.
